

COURIER MANAGEMENT SYSTEM

Track • Manage • Deliver

Courier Management System (CMS)

User Story:

Courier and logistics companies often find it hard to manage shipments and deliveries efficiently because they depend on manual procedures and systems that do not communicate with one another. Without a single, centralized way to track shipments, it is difficult to follow a parcel's movement in real time, which leads to late delivery updates and poor visibility for customers. Delivery agents are still assigned by hand, which raises the risk of scheduling conflicts and operational delays. In addition, the lack of automated notifications prevents timely communication with customers, and the absence of performance analytics leaves managers with little insight into how efficiently the operation is running. Running several branches becomes even harder without an integrated platform, causing coordination problems between locations. Taken together, these challenges lead to unhappy customers, lower productivity, operational inefficiency, and, ultimately, lost revenue for the organization.

1. INTRODUCTION

1.1 Project Overview :

Courier and logistics companies struggle to manage shipments and deliveries efficiently because their operations are manual and their systems are disconnected. As a result, status updates arrive late, customers have limited visibility, and day-to-day operations become inefficient.

The Courier Management System (CMS) is a cloud-based solution built on Salesforce that brings shipment booking, tracking, delivery agent assignment, automated status updates, billing, and analytics together in one place. It improves operational efficiency, raises customer satisfaction, and gives the business real-time insight.

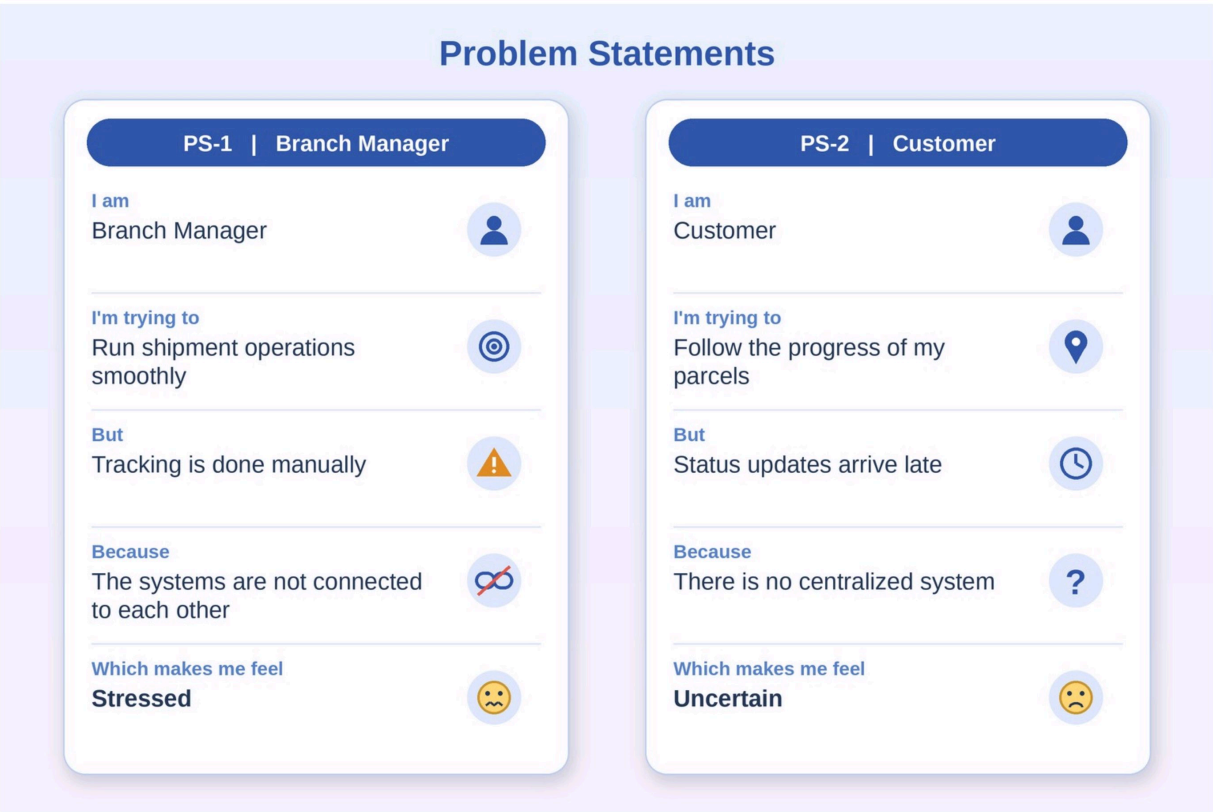

1.2 Purpose :

The purpose of the Courier Management System (CMS) is to automate and centralize courier and logistics operations on the Salesforce platform. It is intended to replace manual, fragmented processes with an integrated digital solution that supports efficient shipment booking, real-time tracking, delivery agent assignment, automated notifications, billing, and performance reporting. By offering one unified platform for managing shipments across multiple branches, CMS improves operational visibility, strengthens communication with customers, reduces delays and errors, and speeds up decision-making through analytics. Ultimately, the system aims to raise service efficiency, customer satisfaction, and overall profitability.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

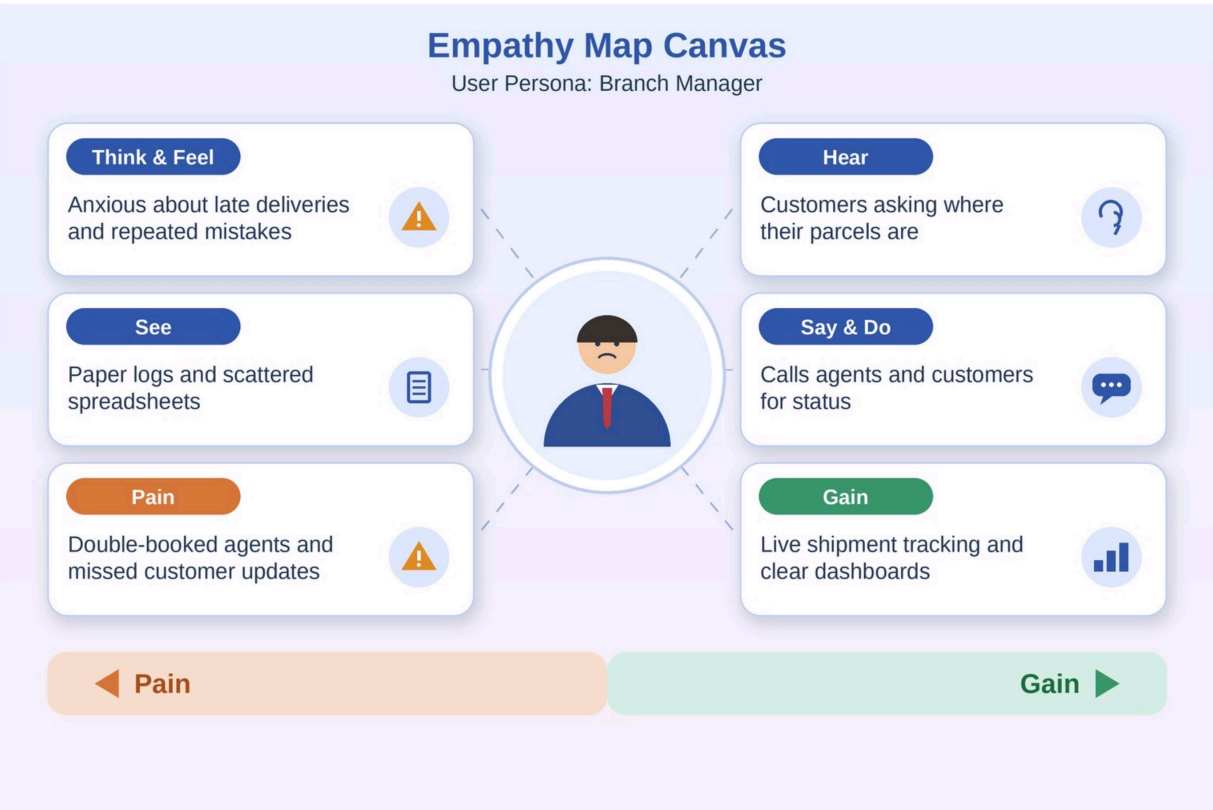

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Branch Manager	Run shipment operations smoothly	Tracking is done manually	The systems are not connected to each other	Stressed
PS-2	Customer	Follow the progress of my parcels	Status updates arrive late	There is no centralized system	Uncertain

2.2 Empathy Map Canvas

User Persona: Branch Manager

- **Think & Feel:** Anxious about late deliveries and repeated mistakes
- **Hear:** Customers asking where their parcels are
- **See:** Paper logs and scattered spreadsheets
- **Say & Do:** Calls agents and customers for status
- **Pain:** Double-booked agents and missed customer updates
- **Gain:** Live shipment tracking and clear dashboards

2.3 Brainstorming & Idea Prioritization

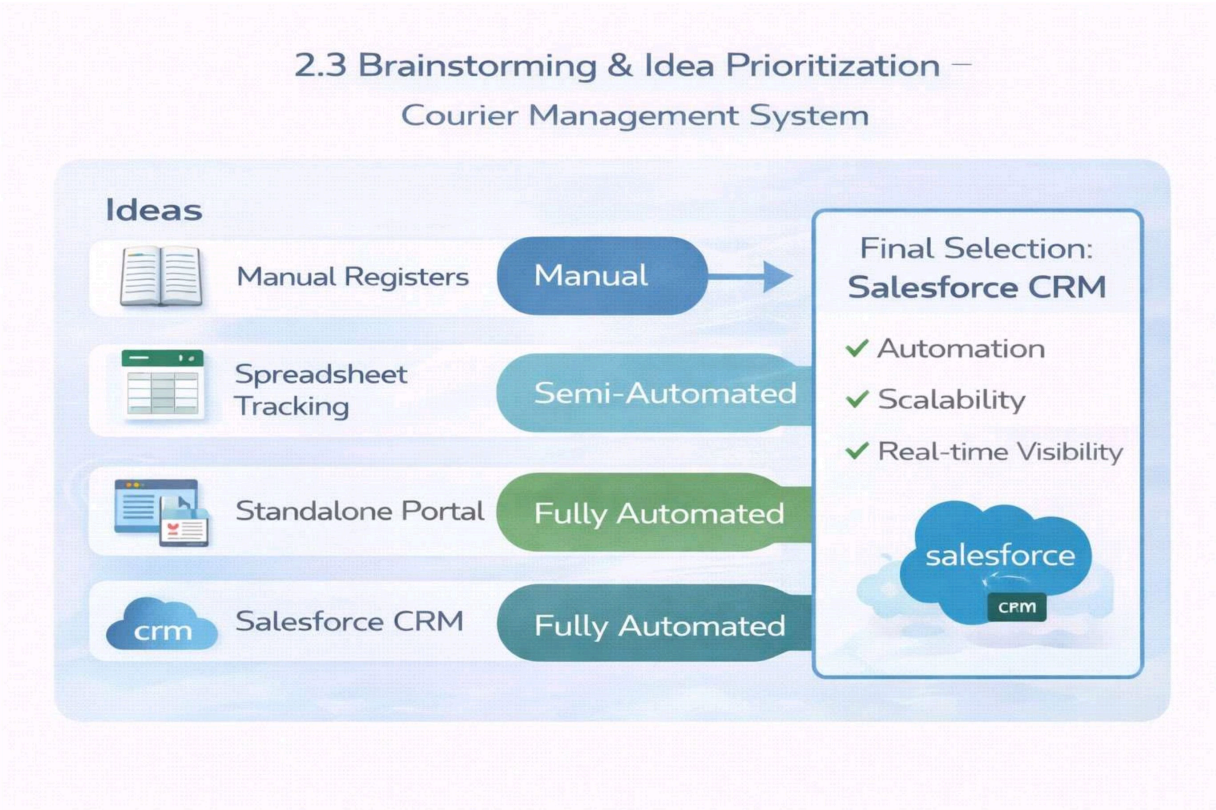

Ideas Considered

- Manual registers
- Spreadsheet-based tracking
- A standalone portal
- Salesforce CRM

Final Selection

Salesforce CRM was chosen because of its:

- Automation capabilities
- Scalability
- Real-time visibility

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages:

- Booking → Shipment Creation → Agent Assignment → Transit → Delivery Update → Invoice → Reporting
